

## RIGMASTER

### PRESSURE WASHER DETERGENT

**RIGMASTER** is a heavy-duty pressure washer detergent formulated with a highly-active water conditioners and cleaning agents. **RIGMASTER** is designed to tackle grit and road grime in heavy-duty truck wash applications, while being safe to use on all common automobile paint and coatings.

The water conditioners in **RIGMASTER** make it ideal for use in areas with hard water. However, carwash operators that have installed water-softener equipment will achieve even better performance at lower product concentrations.

### FEATURES & BENEFITS

- Excellent on road film, bugs, windshield eyebrows, and road salts
- Highly active formula
- Safe for all types of pressure washers
- Low-phosphate formulation

### DIRECTIONS FOR USE

- |                        |                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Use procedure</b>   | Use <b>RIGMASTER</b> as a presoak or high-pressure detergent in wand wash or mobile pressure washing and foaming applications.                                                                                                                                                                                                                                                                  |
| <b>Concentration</b>   | Use 1 to 3 grams per liter of water (1 to 3 pounds per 100 gallons) for wand wash and mobile pressure washing applications, to achieve a concentration 0.1% - 0.3%.<br>Do not use at concentrations greater than 7 grams per liter (140:1 or 0.6% w/v).<br><br>For greatest convenience, make a stock solution containing 10% Rigmaster in water, then dilute on demand to final concentration. |
| <b>Use temperature</b> | <b>RIGMASTER</b> can be used in both hot and cold-water cleaning applications. For best results, hot water (49 to 60°C) and gun pressure of 100 to 1200 PSI are recommended. Lower temperatures and pressure will require a higher product concentration for efficient road film removal.                                                                                                       |
| <b>Rinsing</b>         | High pressure, hot water.                                                                                                                                                                                                                                                                                                                                                                       |

# RIGMASTER PRESSURE WASHER DETERGENT

## PHYSICAL PROPERTIES

Appearance	White powder
Odour	Odorless
Specific gravity @ 20°C	Not applicable
Viscosity	Not applicable
pH	11.5 – 12.5 (1 % w/v solution in water)
Flash point (TCC)	None
Water solubility	Complete
Boiling point	Not applicable
Freezing point	Not applicable
Foaming tendency	High
Rinsing	Good
Concentration monitoring techniques	Electrical conductivity, titration

## INCOMPATIBILITY

Strong oxidizing agents, acids

## WAREHOUSING PRECAUTIONS

Store away from incompatible materials

## AVAILABLE SIZES

			
45Kg	90Kg	180Kg	

## IMPORTANT

Before using **RIGMASTER** always be sure to read and follow precautions and directions for use appearing on the product's container label, and on the safety data sheet (S.D.S).

## FIRST AID MEASURES

### Ingestion

Do not induce vomiting unless directed by medical personnel. Rinse mouth with water and drink 1 or 2 glasses of water and call a POISON CENTER or doctor/physician immediately.

### Skin contact

Take off contaminated clothing and rinse skin with plenty of water. Wash any contaminated clothing before re-use.

### Inhalation

If difficulties occur after dust has been inhaled, remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician. If victim is unconscious, place in the recovery position and get medical attention.

### Eye contact

Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Call a POISON CENTER or doctor/physician immediately.

## PERSONAL PROTECTION
