

The image features a large industrial water treatment tank with various pipes and valves. The scene is overlaid with a blue circular graphic containing the 'eco·flo' logo. The background is a mix of light blue and green abstract shapes.

eco·flo

A complete and high-performance  
product line designed for

**WATER TREATMENT**

[www.eco-flo.ca](http://www.eco-flo.ca)

## Cooling towers

This range includes inhibitors and treatments for corrosion and scale. We also offer bacterial treatment products (biocides).

## Steam boilers

These products are designed to protect your equipment from sludge, scale, and corrosion, and to treat systems where these issues are already present.

## Closed loops

Various deposits, scale, corrosion, bacteria... all of which can create serious problems if not addressed in time. Our products take care of them!

## Cleaning/correction

A range of cleaning and correction products designed to remove rust and scale, correct pH, and balance various water chemistry parameters.

## Dosage/control equipment

Carefully selected instrumentation to monitor operating conditions, adjust chemical injection, and improve treatment consistency.

West Penetone brings more than 140 years of experience in cleaning and sanitation across multiple industry sectors. West Penetone has made significant investments in R&D to remain at the forefront of the market while meeting new safety and environmental requirements.

We offer an innovative solution that complies with standards related to the performance and safety of finished products, employee safety, environmental responsibility, and the optimization of chemical program costs.

Water treatment is no exception, as with the acquisition of AccuChem in 2022, the full expertise of that company in this field has joined the West Penetone family.

Beyond the product itself, West Penetone provides outstanding service. Advisors who listen to your needs and concerns and who know how to anticipate issues rather than simply react to them.

Products that comply with environmental standards.

Prevention and treatment of bacteria, including Legionella.

Corrosion protection and treatment that extend equipment lifespan.

Cleaning procedures that prevent and treat deposit formation.
